care and promotion of health of patients.

3. Demonstrating skills in selection, preparation and preservation of foods for patients.
4. Plan & prepare adequate nutritional requirement for different age group from infant to school children with special consideration.
5. Analyzing the nutritional needs of the patients and monitor the improvements in the health.
6. Evaluating the alterations in micro and macro nutrients in health and illness.

BIO CHEMISTRY AND BIO PHYSICS

1. Understanding the concepts, theories and principles of Biochemistry and Biophysics.
2. Applying the principles of Biochemistry and Biophysics in Nursing.
3. Demonstrating the principles of machines, friction and body mechanics during nursing care.
4. Understanding and using the various bio-medical equipment and biochemical investigations in diagnosis of diseases.
5. Analyzing and evaluating various investigations in diagnosis of disease

PSYCHOLOGY

1. Understand the history of psychology and development of theories and their scientific foundations.
2. Analyze the cognitive, emotional and motivation processes in understanding the patient behaviour in health and illness setting.
3. Express the concepts of personality and its influence on behaviour.
4. Differentiate the psychological needs of people in different age groups
5. Demonstrate the skills in psychological assessment and test.

MICROBIOLOGY

1. Understanding the concepts, principles and importance of microbiology in nursing profession.
2. Understanding and applying the infection control measures in nursing care.
3. Understanding the preparation of slides of various microbes.
4. Classifying the microbes and its impact on diseases.
5. Identifying and assessing the infections through microorganisms and diagnosis of diseases
